THE LAUSANNE AIRWAY COURSE
A common platform for otorhinolaryngologists, anesthetists and intensivists

Why: Understanding of the compromised airway in children and adults is extremely important and sometimes its management can be tricky. While treating such patients, an otorhinolaryngologist requires working in close collaboration with his anesthetist and intensivist. Remember - the best results in airway surgeries lie in the first operation. This can be achieved only by a professional and competent team.

The Lausanne Airway Course is designed to get otorhinolaryngologists, pediatric & adult anesthetists and intensivists together on a common platform to discuss management of difficult airway conditions namely - laryngomalacia, intubation injuries, laryngotracheal stenosis and complex airway anomalies. The course design will include didactic lectures in the field of ENT, Anesthesia and Intensive Care Medicine, as well as live endoscopies. In addition, there will be hands-on training for ENTsurgeons to practice airway corrective procedures on animal models and difficult airway management workshops for the anesthetists. Together, we will be able to develop a team with a focused approach while treating these serious conditions.

Highlights:
Didactic lectures of common interest to ENT, anesthetists and intensivists
Separate lectures and round tables pertinent to each specialty
Live airway endoscopy
Hands-on anesthesia workshop
Hands-on laryngotracheal reconstructive surgeries in animal models

Mentor:
Professor Philippe MONNIER

Organising Chairman:
Dr Kishore SANDU

Hands-on training Coordinator:
Dr Madeleine CHOLLET
Dr Patrick SCHOETTKER

Course language: English

Registrations
open in April 2015
(details to follow)
